EAS Global Auditing Expertise

Key Points:

- EAS provide international experience in GHG Program Carbon Offset Auditing.
- Methodology validation.
- Lead Auditor expertise with ISO 14000 series and VCS Independent Expert Status.
- Audited over 1.2 million hectares spread across more than a dozen carbon projects in six countries across the globe.
- Experience in Africa, the Americas, and Asia-Pacific.

Auditing Standards:

Voluntary Carbon Standard (VCS)

Clean Development Mechanism (CDM)

Climate, Community, and Biodiversity Alliance (CCBA)

Australian Government National Carbon Offset Standard (NCOS)

Our Role:

In our role as third party validation and verification consultants in the AFOLU sector we work independently, or in teams, to assess the compliance of Agriculture and Forestry Carbon Projects against GHG validation/verification standards. We are involved in all the requirements of validation/verification from document review, to travelling the globe to assess field activities, interview stakeholders and liaise with communities.

Fostering good working relationships with clients is a key focus of our business. EAS staff co-ordinate the audit process with clients and stakeholders, ensuring that the client understands the audit scope and intent, and we provide specific guidance on the data and information required to successfully complete the audit process.

Our role in the validation / verification process:

- assembling, training and scheduling certification teams
- liaising with stakeholders
- itinerary planning
- interviews, inventory plot re-measurements and assessment of data management procedures
- stakeholder and community liaison
- evaluation of project documentation against observed site conditions
- writing, review and finalisation of audit reports

Our validation and verification partners include:

Scientific Certification Services (SCS)

Det Norske Veritas (DNV)

Rainforest Alliance

Client Feedback:

Redd Forests employed EAS to complete the first validation and verification of three forest carbon projects in Tasmania, Australia. These projects use Improved Forest Management activities to prevent the greenhouse emissions associated with business-as-usual logging practices.

EAS brought a rare professionalism and efficiency to the validation process. The quality of Redd Forests' projects benefited immensely from the validator's comprehensive feedback and recommendations on best practice. At all times, EAS sought to balance the goals and requirements of the relevant standards with a recognition of stakeholders' needs and concerns.

Redd Forests would like to particularly recommend and thank Dr Carly Green, who coordinated the validation process.
