

It's all in the Detail

Project Feasibility Studies and Due Diligence

Have a project in mind? Not sure if it's a goer?

Requirements of carbon programs and standards can make or break projects. Navigating through these requirements to clarify investment risks and project focus areas can be a mine field. Our global experience in assessing and auditing scores of projects in Forestry and Agriculture means we have seen and addressed many of these issues. Catching them early can improve project margins and reduce conflict. Project risk reduction all round.

Methodology Development

Have an idea for a project but a methodology doesn't exist yet?

Methodology development can be a complex and daunting process. We work with you to develop generic or project specific Agriculture and Forestry methodologies that are pragmatic whilst addressing all required integrity principles.

Project Development

Designing and writing compliant documentation doesn't excite you?

Our compliance engineers love it. Give them the standards, access to your stakeholders and a complex methodology and they are in heaven. We love designing projects that are not only compliant but are developed with real project management tools that make project delivery efficient.

Monitoring and Reporting

If designing and carrying out a monitoring program for your project isn't your thing?

Come and talk to us. We have designed and executed monitoring and reporting programs to achieve verification. We love hands on project management and take the hard work out of projects. We literally go to the ends of the earth for you. Of course we are also happy to bring you with us to give you the confidence to do it yourself.

Capacity Building

If you just don't really get what this carbon stuff is all about?

Over 500 people globally have benefited from our training courses in project development and carbon accounting standards and offset programs. From helping people to understand their risks and opportunities, to providing the skills to sail through third party validation, we have trained people in every aspect.

Validation and Verification

If you have got this far without needing us we would be happy to be your third party!

We have provided validation and verification services against Australian and International standards on more than a dozen projects in 10 countries. Clients appreciate our experience and guidance in the pre-validation phase to reduce the stress and delays at your projects final hurdle.

What People are Saying About Us

Auditing

EAS brought a rare professionalism and efficiency to the validation process. At all times, EAS sought to balance the goals and requirements of the relevant standards with recognition of stakeholders' needs and concerns. (Redd Forests - Tasmania)

Project Development

We are extremely grateful for the professionalism, dedication, patience and hard work of EAS that has contributed immensely to the success of this critical community based project. (Green Belt Movement - Kenya)

Training and Capacity Building

Great to see facilitators that do not patronise the farmers. EAS were understanding, non-biased and open to discussion. Landowner Capacity Building (Project Platypus - Stawell, Western Victoria)

The EAS presenter had an in-depth knowledge of greenhouse gas accounting across agriculture and forestry and delivered insightful examples from previous experience. (CFI Training - Rural Landcare Facilitators DAFF - Australia Wide)

What are we up to?

We are scientists, engineers and forestry specialists advising, planning and delivering carbon projects in Agriculture and Forestry.

We put our heads together to measure, model, poke, prod, monitor and report carbon in forestry and agriculture projects for long term environmental and social outcomes. It is all about well considered long-term solutions for the generations that follow.

We have some pretty hefty projects under our belts and a diverse range of clients from national and international governments, small communities, non-profit organisations right down to local landowners. For our clients, the common aim is to be compliant, informed and smart about the decisions they are making in regard to sustainable practises and integrated solutions. If that doesn't sound fun, we don't know what is!

What you want. What you need.

We at EAS understand carbon project investors and developers have a range of needs. Our services reflect those needs and our track record gives clients confidence that we will deliver:

- Methodology Development*
- Project Design and Development*
- Monitoring, Reporting and Verification*
- Capacity Building and Training*
- Third Party Validation and Verification*
- Due Diligence*

Long term, experienced, hands-on partners.
The team you have been looking for.

We are your Carbon Project Specialists
